

Make a Cowboy boot with me...

Cutters For Clay

www.cuttersforclay.co.uk

1. Roll your clay to 7mm thick. Cut one of each of the pieces, but 2 of the loops.

2. Score and slip the heel onto the underside of the sole

3. Blend the seam all the way round

4. Stand up the boot piece and score and slip the two straight edges

5. Join the two edges together and then blend a sausage of clay over the join on the outside, and on the inside

6. Blend thoroughly so you can't see the join

7. score and slip the flat edge of the boot and where it's going on the sole

8. attach the boot to the sole like this

9. Smooth around the seam so you can't see the join

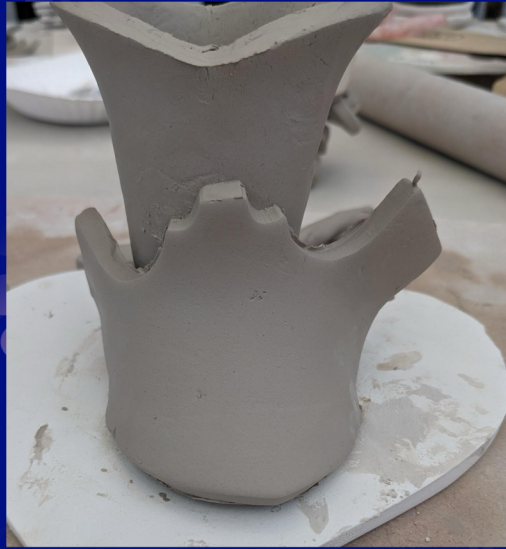

10. add an air hole at the front of the boot

11. squeeze the boot into shape. Check how it looks from all angles

12. score and slip the piece shown and around the EDGE of the sole

13. Attach in place, lining up around the sole first

14. Then firm the rest into place here

15. Score and slip the back piece and the boot above the heel

16. Attach in place, lining up the joins and blend these together

17. Pick up the boot and blend in the joint underneath

18. Seal all joins with a damp paintbrush

19. fold the loop pieces carefully and score and slip the joins. Squeeze into place

20. Seal this part with a damp paintbrush.... This can easily crack so dry very slowly with a bit of plastic over these bits

Your boot is now ready for drying, unless you fancy adding extra decorations.... Have fun!
